A+ RATINGS FOR alkorPLAN

RENOLIT, manufacturers of Europe's most comprehensive range of single ply waterproofing membranes, has achieved A+ ratings, in the latest BRE Green Guide, for its alkorPLAN® roofing products and A+ for its alkorPLAN® system when mechanically fastened over insulation in lightweight steel frame constructions.

"We are particularly pleased," explains David Davis, technical manager for the alkor Waterproofing Division of **RENOLIT (UK)**: " that those architects, designers, developers, constructors and users of new and existing buildings who are striving to achieve the best possible environmental assessment can have complete confidence in our range of synthetic roofing materials and systems. The BRE Environmental Assessment Method (BREEAM) is widely recognised throughout the world as the benchmark standard for a range of building systems. For both our alkorPLAN® products to be assessed as A+, is quite an achievement!"

"Factors taken into account included all of the individual materials used in the manufacturing processes, raw energy sources and usage, water usage, waste re-cycling, packaging and a host of other factors," continues David Davis. "Detailed confidential information was made available to the BRE by a selected group of manufacturers over a series of meetings set up by Single Ply Roofing Association (SPRA) to ensure that the latest BRE Green Guide is as up-to-date as possible. It makes comforting reading for those who are interested in the environmental impact of a building throughout its life span."

RENOLIT AG is an international leader in the manufacture of high-quality thermoplastic films and products. This independent family-run business, which has been setting benchmarks for quality and innovation for 60 years, now employs a workforce of approximately 4,200 employees at its 33 production sites and sales companies. The **RENOLIT** brand enjoys a worldwide reputation for technical expertise, modern product design and customer-orientated service. **RENOLIT** plastic films can be used to add a finishing touch to furniture surfaces, construction elements and hi-fi products, to seal off structural bodies, landfill sites and roof structures or to line swimming pools. **RENOLIT** produces films and tubes for medical applications such as blood bags and also manufactures recyclable panels as composite products with natural fibres for the construction and automotive industries. In addition, **RENOLIT** films are used to produce office organisation products, interior trims for motor vehicles as well as self-adhesive products and technical items. Manufacturing Europe's most comprehensive range of single ply waterproofing membranes, the **RENOLIT** product portfolio includes alkorPLAN®, alkorFLEX®, and AlkorPLUS® brands of mechanically fastened, bonded, ballasted, green and profiled systems for roofs as well as swimming pool liners and lining membranes for canals, lakes, reservoirs, tanks, tunnels and water features.
